about the following questions:

Warm Up Challenge

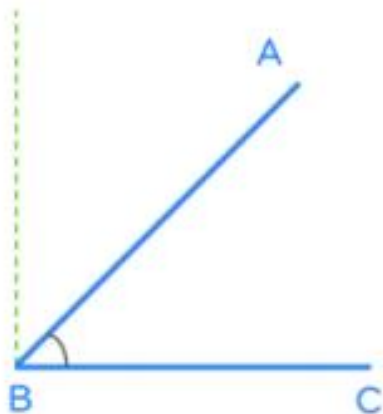

Week 5 – Home Learning

Acute, obtuse and reflex angles

Here are some other types of angles. Complete the sentences.

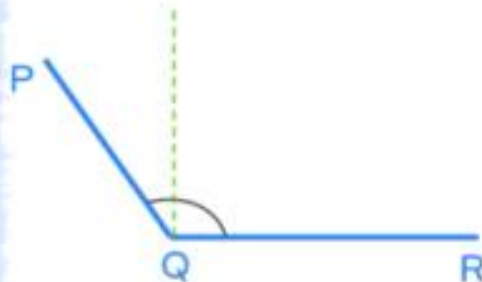

Acute angle:

measures
than a right angle.

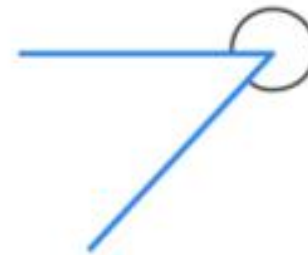

Obtuse angle:

measures
than a right angle
but than
a straight angle.

Reflex angle:

measures
than a straight angle
but than
a whole turn.

Warm your brains up thinking about the following questions:

Warm Up Challenge

1. Select the correct words from the box.

right

reflex

acute

obtuse

- a) An angle less than 90° is

- b) An angle equal to 90° is

- c) An angle more than 90° and less than 180° is

- d) An angle greater than 180° and less than 360° is

2. a) Angles at a point add up to

- b) Angles on a straight line add up to

Right angle

Angles are often measured in degrees. The symbol for degrees is $^{\circ}$.

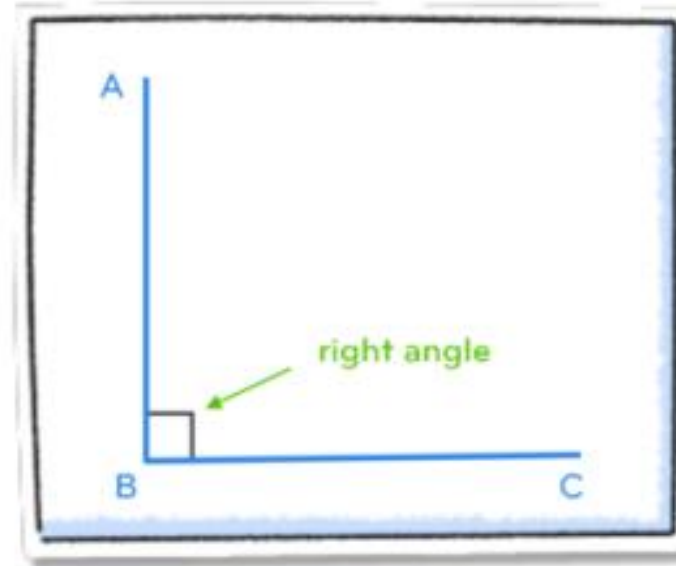

A right angle measures 90 degrees.

Write this using the degree symbol.

A right angle is the same as a quarter of a turn.

We mark right angles like this:

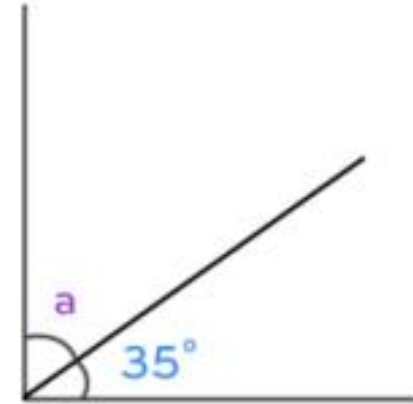

Missing angles

Find the missing angle.

The **right angle** is divided into two angles.

You can use letters to represent the angles.

Let **a** stand for the **missing angle**.

To find a **missing angle** in a right angle, you can subtract the **given angle** from 90. So, you know:

$$a = 90 - 35$$

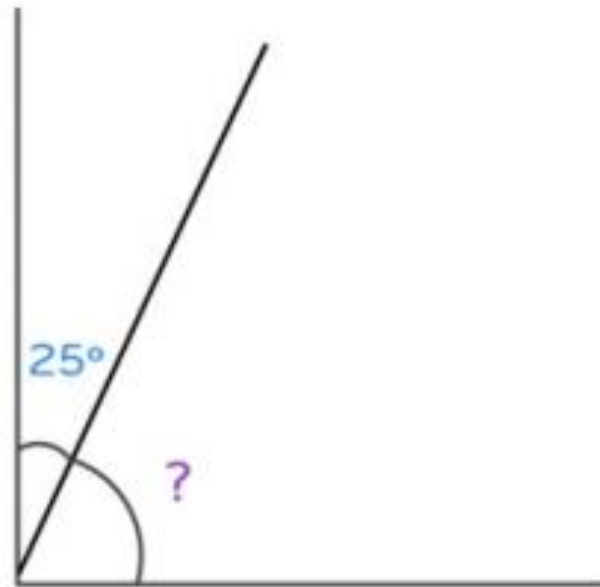

$$= 90 - 35$$

So, the missing angle measures

Missing angles

Find the missing angle.

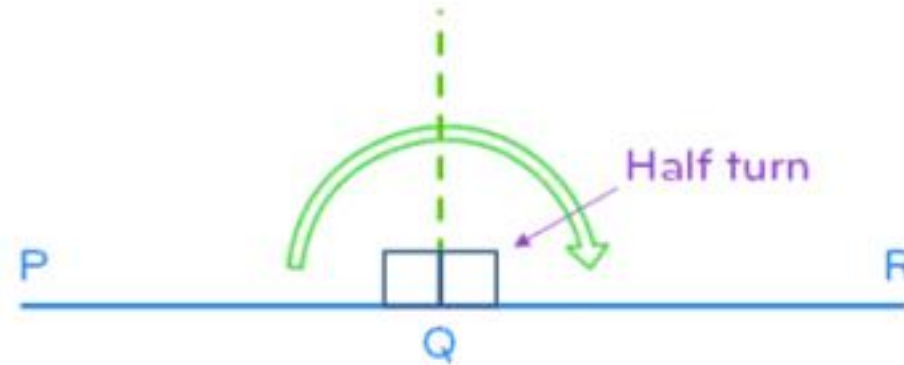

Remember,
a right angle
is 90°

Straight angle

A straight angle is an angle made on a straight line.

A straight angle is the same as a half turn.

A half turn = 2 right angles.

A straight angle = 2 right angles

1 right angle is
 90°

How many degrees is a straight angle?

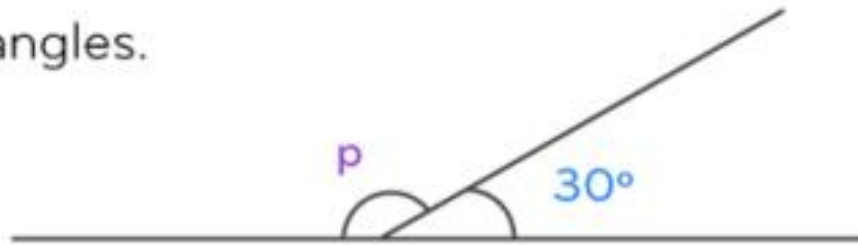

Missing angles

Find the missing angle.

The **straight angle** is divided into two angles.

You can use letters to represent the angles.

Let **p** stand for the **missing angle**.

To find a **missing angle** in a straight angle, you can subtract the **given angle** from 180. So, you know:

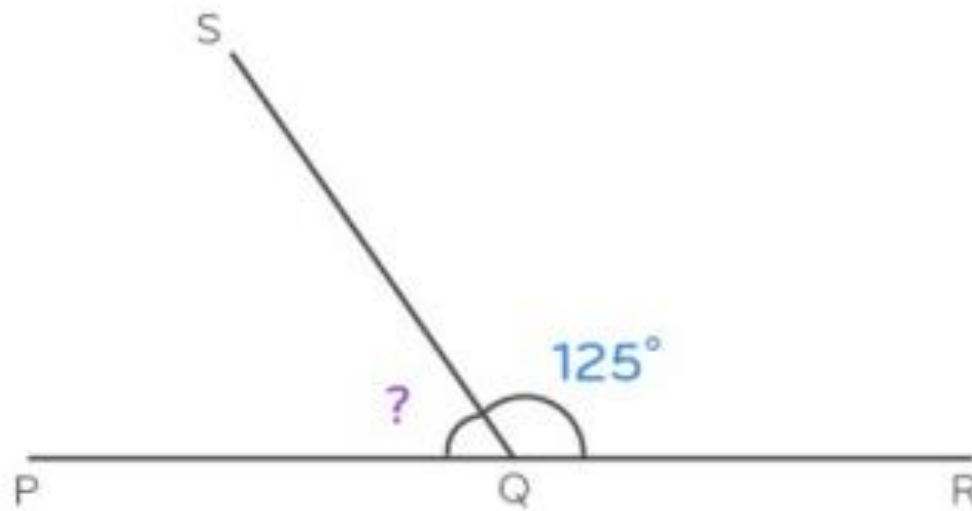

$$p = 180 - 30$$

$$= 180 - 30$$

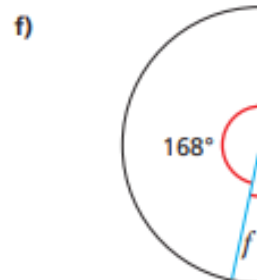

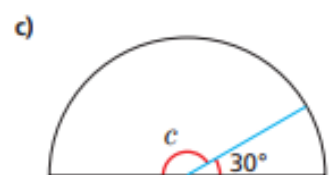

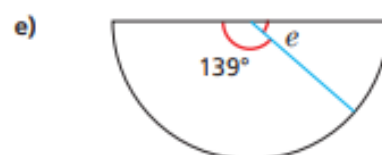

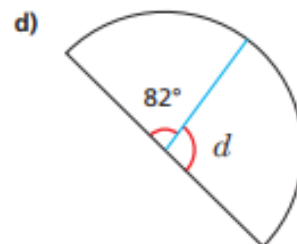

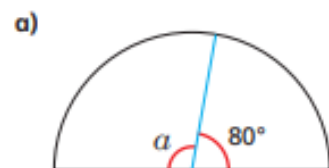

So, the missing angle measures

Missing angles

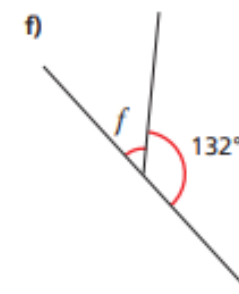

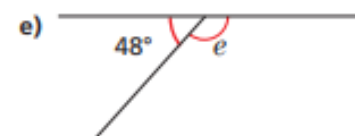

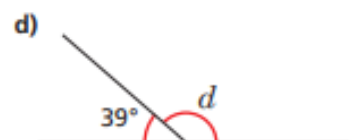

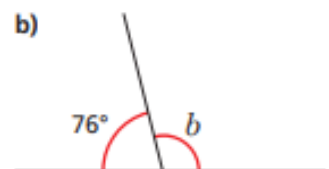

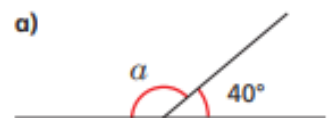

Find the missing angle.

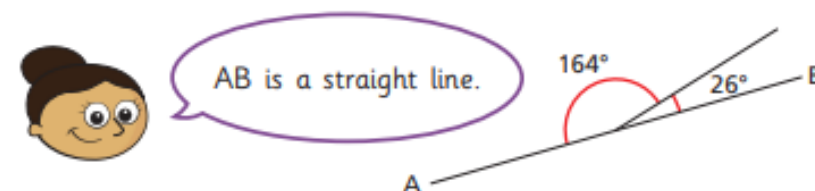

1 Work out the sizes of the unknown angles.

2 Work out the size of the unknown angles.

3 Dora draws two angles.

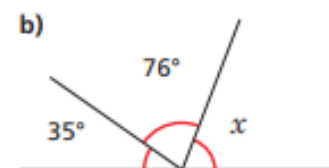

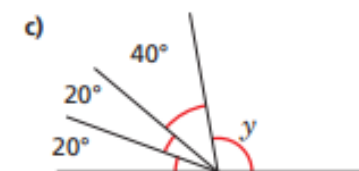

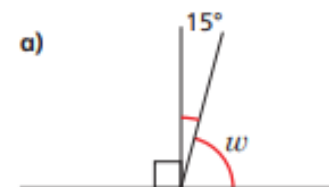

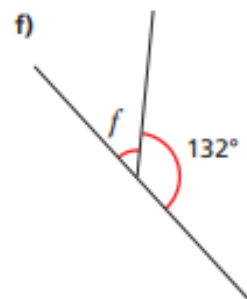

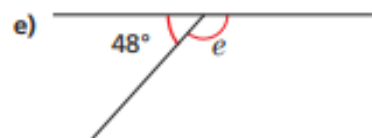

Do you agree with Dora?

Explain your answer.

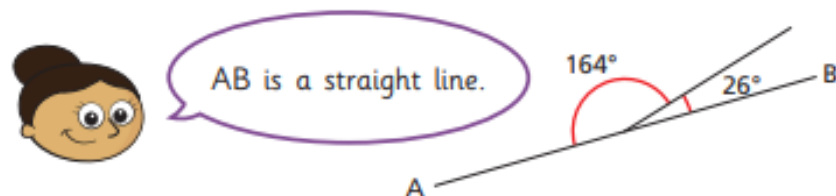

4 Work out the size of the unknown angles.

Show the steps in your working.

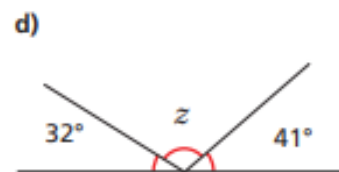

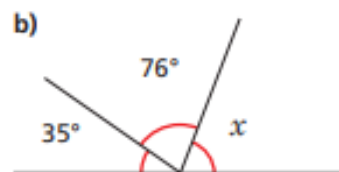

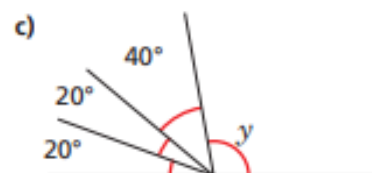

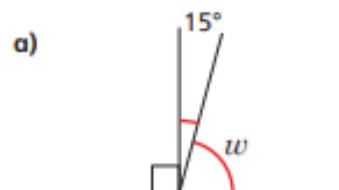

- 3 Dora draws two angles.

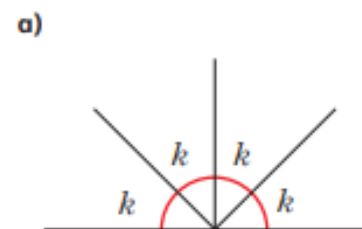

Do you agree with Dora?
Explain your answer.

- 4 Work out the size of the unknown angles.

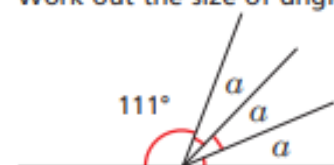

Show the steps in your working.

- 5 Work out the sizes of the unknown angles.

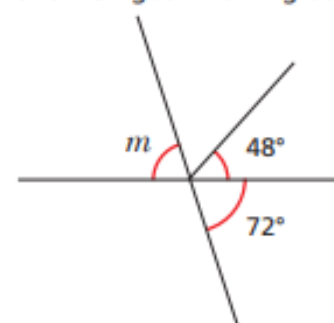

- 6 Work out the size of angle a .

- 7 Work out the size of angle m .

Show all your working out.

- 8 Two angles are marked.

Angle b is eight times the size of angle a .
What is the size of each angle?
